APIdays Mediterranea
May 29th & 30th, Barcelona

APIdays is the main independent conference on APIs and data intelligence where the API community of developers, startups, corporations and tech gurus get together to share ideas, experiences and evangelization of the API universe.

APIdays was born in 2012 in Paris and spread internationally during 2013 with local editions in San Francisco and Madrid. In 2014, Berlin, Cairo, Tokyo and Moscow will also be joining the APIdays family.

«The web 1.0 was readable, the web 2.0 was social. Now the web is programmable through APIs.»

APIdays Mediterranea is the Southern Europe edition of APIdays. Following the good feedback from the 2013 edition in Madrid, APIdays Mediterranea 2014 will be held in Barcelona on May 29th and 30th at the Mobile World Centre. Located on the Plaça Catalunya, this is one of the best auditoriums in town that hosts some of the main international tech events, including the Mobile World Congress.

« If software is eating the world, APIs are eating software. »

APIdays will consist in conferences, workshops and tutorials on various topics concerning the development, architecture, management and business of APIs for an international audience of API enthusiasts. Among others, notable speakers include the API evangelist **Kin Lane**, hypermedia evangelist and rubyist **Steve Klabnik** and **Romain Huet from Twitter.**

APIdays Mediterranea is organized by **Webshell** and **Apicultur**.

Why APIdays?

APIs are the future of software and constitute a revolution not only for experts and tech enthusiasts: APIs open up a world of possibilities in terms of what data can do for companies, institutions and citizens. Cutting edge concepts like the Internet of Things and wearable technology are possible thanks to APIs and are changing our idea of what devices can do for us.

«No one questions today the importance for institutions and business of having a website. In a few years from now, no one will doubt about the need of offering an API. »

Sessions at APIdays will not only deal with technical aspects like API design and its architecture but will also cover the new business models that APIs offer. Featured topics at APIdays include how APIs can help open governments make data accessible and how APIs are disrupting Natural Language Processing and the publishing industry.

APIdays has become the international reference in the business of APIs and SaaS. This edition of APIdays Mediterranea is a unique opportunity in Barcelona to gather with the international leading figures of the API industry and learn what the future of the web brings.
